Letter of Recommendation for Alexander Koshcheev

To whom it may concern,

I am pleased to recommend Alex, whom I have had the opportunity to teach in several foundational courses focused on the web as an application platform. In these courses, we covered a broad range of modern web development concepts, including traditional web applications using NestJS, single-page applications with React.js, and hybrid application approaches based on Next.js.

Throughout these courses, Alex consistently distinguished himself through his ability to quickly identify very strong solutions, even for challenging and complex tasks. He approaches problems analytically, is able to derive well-founded decisions, and can clearly justify and communicate his reasoning - an ability that is particularly valuable in software development and collaborative environments.

Alex is highly curious and demonstrates a strong capacity to learn new concepts rapidly. His intellectual curiosity is paired with a high level of ambition and diligence; he reliably invests the necessary effort to deepen his understanding beyond the minimum requirements. This combination allows him to translate theoretical concepts into practical, well-structured solutions.

In discussions, Alex contributes constructively and thoughtfully. He listens carefully to different perspectives, builds upon the ideas of others, and often plays a decisive role in guiding the group toward a valuable and well-reasoned outcome. His collaborative mindset and technical competence make him a respected and effective participant in team settings.

Based on my experience, I am confident that Alex would be a significant asset to any development team. Whether as a working student or as an intern, he would contribute not only strong technical skills but also motivation, reliability, and a professional attitude. I recommend Alex without reservation and am certain that he will meet - and exceed - the expectations placed upon him.

Sincerely,

Prof. Dr.-Ing. David Linner
